Technical Reports

Technical Reports are research documents that are of sufficient importance to be preserved, but which for some reason are not appropriate for primary scientific publication. Inquiries concerning any particular Report should be directed to the issuing establishment.

Rapports Techniques

Les rapports techniques sont des documents de recherche qui revêtent une assez grande importance pour être conservés mais qui, pour une raison ou pour une autre, ne conviennent pas à une publication scientifique prioritaire. Pour toute demande de renseignements concernant un rapport particulier, il faut s'adresser au service responsable.

PREFACE

Due to the great replication of feature names in the Canadian Provinces and also to the fact that so many of our lakes, rivers, and streams are as yet unnamed, users of this bibliography should first refer to the relevant Gazetteer of Canada in order to verify both the name and coordinates of the freshwater feature they require.

Authors of scientific papers on Canadian freshwaters must also accurately identify the features they have investigated. A great deal of basic data published in the past cannot be included in these bibliographies because this has not been done. Unfortunately this is also true for many current papers. If features investigated are not in the Gazetteers or their Supplements, then the 1:50,000 topographical map No. on which they appear should be given together with the Military Grid Reference. Latitude and longitude are not precise enough for accurate initial identification.

INTRODUCTION

This bibliography is the fourth in a continuing series and contains a further 1,000 references and the approved freshwater features to which they refer. Each of the 1,000 references is identified by a number and appears in the Index in numerical order.

The bibliography is divided into provinces, in alphabetical order. Each province contains a list of freshwater features in alphabetical order. With each feature is given its coordinates as published in the relevant Gazetteer or its Supplement, and followed by the Reference Index No(s) applicable to it.

The Reference Index is applied only to those freshwater features whose names and coordinates have been, or will be, approved by the Canadian Permanent Committee on Geographical Names. Unapproved feature names and coordinates are kept on file until they become approved.

Beginning with this issue, previous names and misspelt names (as found in the literature) of approved features are included, and appear below and to the right of the approved name. They are also cross-referenced.

When there is a change of name of a freshwater feature, it invariably becomes out of alphabetical order in the bibliographies. It is then deleted and entered into the latest issue. Thus some of the Reference Index numbers given herein refer to the previous three bibliographies.

Amendment Lists for Bibliographies Nos. 1, 2, and 3, and Appendix A of this series are included at the beginning of this report and recipients are advised to amend their copies on receipt.

Bibliographies Nos. 1, 2, and 3, and Appendix A are published as Technical Reports Nos. 471, 504, 566, and 605, respectively.

INTRODUCTION

La présente bibliographie est la quatrième d'une série permanente; elle contient 1000 nouvelles références et la liste des accidents géographiques d'eau douce auxquels ces dernières renvoient. Chaque référence est identifiée par un numéro et apparaît à l'index à l'ordre numérique.

La bibliographie est ordonnée alphabétiquement par province, et les accidents d'eau douce dans chacune sont énumérés par ordre alphabétique, accompagnés de leurs coordonnées telles que publiées dans le Répertoire pertinent des noms géographiques ou son supplément, suivies du (des) n^{o(s)} d'index de la (des) référence(s).

L'index des références a été réservé aux accidents d'eau douce dont le nom et les coordonnées ont été ou seront approuvés par le Comité permanent canadien des noms géographiques. Les noms et les coordonnées non approuvés sont gardés en dossier jusqu'à leur approbation.

A compter du présent numéro, les noms antérieurs et mal orthographiés (trouvés dans les publications) des accidents géographiques approuvés sont indiqués au bas et à la droite du nom approuvé, avec renvoi à la référence pertinente.

Lorsque le nom d'un accident change, il n'est plus à l'ordre alphabétique dans les bibliographies. On l'enlève et l'inscrit dans le dernier numéro. Ainsi, les numéros d'index de certaines références données dans le présent numéro peuvent renvoyer aux trois bibliographies précédentes.

Les listes des rectifications des bibliographies n^{os} 1, 2 et 3 et de l'annexe A de la présente série sont données au début du rapport; on conseille à leurs détenteurs de faire immédiatement les corrections indiquées.

Les bibliographies n^{os} 1, 2 et 3 et l'annexe A constituent les rapports techniques n^{os} 471, 504, 566 et 605, respectivement.

ACKNOWLEDGEMENTS

I would like to thank Mr. Alan Rayburn, Executive Secretary of the Canadian Permanent Committee on Geographical Names and also the Provincial Representatives for their generous help in identifying many of the Canadian freshwater features found in the literature which are either not in the Gazetteers and/or are inadequately described.

My appreciation also to Mrs. Emma Fosdick, Librarian at the Canada Centre for Inland Waters and her staff, in particular Mrs. Norma Watson, for handling my many requests for inter-library loans.
