Fisheries and Marine Service Data Report No. 81

c. 1

Fisheries and Marine Service
Data Reports

These reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of Data Reports reflects the broad interests and policies of the Fisheries and Marine Service, namely, fisheries management, technology and development, ocean sciences and aquatic environments relevant to Canada.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records by the Pacific Biological Station, Nanaimo, B.C. The series name was changed with report number 26.

Data Reports are not intended for general distribution and the contents must not be referred to in other publications without prior written clearance from the issuing establishment. The correct citation appears above the abstract of each report.

Service des pêches et des sciences de la mer
Rapports statistiques

Ces rapports servent de base à la compilation des données de classement et d'archives pour lesquelles il y a peu ou point d'analyse. Cette compilation aura d'ordinaire été préparée pour appuyer d'autres publications ou rapports. Les sujets des Rapports statistiques reflètent la vaste gamme des intérêts et politiques du Service des pêches et de la mer, notamment gestion des pêches, techniques et développement, sciences océaniques et environnements aquatiques, au Canada.

Les numéros 1-25 de cette série ont été publies à titre de Records statistiques, Service des pêches et de la mer, par la Station biologique du Pacifique, Nanaimo (C.-B.). Le nom de la série a été modifie à partir du numero 26.

Les Rapports statistiques ne sont pas préparés pour une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au haut du résumé de chaque rapport.

ABSTRACT

Alexander, D.R. 1978. Hatchery salmonid production and distribution (1977), Nova Scotia, New Brunswick and Prince Edward Island. Fish. Mar. Serv. Data Rep. No. 81 ,109 p.

This data record provides summaries of numbers, lengths and weights for all species of fish produced and distributed in 1977 by fish culture stations of the Resource Branch, Maritimes Region, Fisheries and Marine Service, Department of Fisheries and Environment. Data are subdivided by station, developmental stage and species; and are also provided by county, province and various administrative categories. Records for both 1976 and 1977 provide the following data for each location stocked: county, location name, location code – which is unique and can be matched to latitude and longitude, number of fish released, mean fork length of group, total weight, marks – such as tags or fin clips, species, stock description, developmental stage and station of origin.

Key words: Fish culture, aquaculture, stocking, tagging, fork length, weight, Atlantic salmon, trout, Maritimes Region.

RESUME

Alexander, D.R. 1978. Hatchery salmonid production and distribution (1977), Nova Scotia, New Brunswick and Prince Edward Island. Fish. Mar. Serv. Data Rep. No.81 , 109 p.

Ce dossier présente un rapport succinct de données ayant trait au nombre, à la taille et au poids de toutes les espèces de poissons élevées et distribués en 1977 par les établissements piscicoles de la Direction des ressources, Service des pêches et de la mer, ministère des Pêches et de l'Environnement, région de l'Atlantique. Les données indiquées sont réparties par établissement piscicole, stage de développement et espèce ainsi que par comté, province et catégories administratives diverses. Les dossiers de 1976 et de 1977 donnent les renseignements suivants pour chaque endroit repeuplé : comté, nom de l'endroit, code de l'endroit qui est particulier à chaque endroit et à partir duquel on peut déterminer la longitude et la latitude, nombre de poissons libérés, longueur moyenne à la fourche caudale, poids global, marques telles qu'étiquettes ou pinces fixées aux nageoires, espèce, description du stock, stage de développement et établissement piscicole de provenance.

Mots clés : Pisciculture, aquaculture, repeuplement, étiquetage, longueur à la fourche caudale, poids, saumon de l'Atlantique, truite, région des Maritimes.

INTRODUCTION

Computer tabulated summaries of hatchery trout production and distribution in the provinces of Nova Scotia, New Brunswick and Prince Edward Island have been prepared for the years 1974 (Alexander 1975) and 1975 (Alexander 1976). The data base was subsequently expanded to include all fish species liberated by fish culture stations operated by the Freshwater and Anadromous Division in 1976 (Alexander 1977). In that year new information was recorded and conversion was made to metric units.

The present report summarizes distribution data in several forms for 1977 and provides detailed distribution data for each location stocked in 1976 and 1977.

CODES AND ABBREVIATIONS

Because of limitations on space in the tables, it has been necessary to utilize abbreviations, codes or category words in a number of cases.

DATE

All dates are recorded in numerical form as: day/month/year.

SPECIES

In Tables 1 and 2, the common name of each species distributed has been printed; but in Tables 3 and 4, these have been abbreviated as follows:

S = Brook trout or speckled trout *(Salvelinus fontinalis)*

R = Rainbow trout *(Salmo gairdneri)*

N = Lake trout or togue or grey trout *(Salvelinus namaycush)*

L = Landlocked Atlantic salmon *(Salmo salar)*

A = Anadromous Atlantic salmon smolts *(Salmo salar)*

J = Anadromous Atlantic salmon non-smolts *(Salmo salar)*. Normally these fish will be juvenile Atlantic salmon not having reached the smolt stage, but post-smolt salmon would also be recorded under this species designation.

TROUT = As used with species in Table 3, this includes: brook trout (S), rainbow trout (R), lake trout (N) and landlocked Atlantic salmon (L), but excludes all anadromous Atlantic salmon.

SALMON = As used with species in Table 3, this includes both smolt (A) and non-smolt (J) anadromous Atlantic salmon.

ALL = As used with species in Table 3, this refers to all salmonid species distributed by fish culture stations of the Freshwater and Anadromous Division.

STAGE

Developmental stage of salmonids distributed is abbreviated in all tables in a form consistent with past practice in the fish culture program as follows:

D(d) - first two weeks after absorption of yolk sac

1 - 2-8 weeks after absorption of yolk sac

2 - 8-14 weeks after absorption of yolk sac

3 - 14-20 weeks after absorption of yolk sac

4 - 20-26 weeks after absorption of yolk sac

5 - 26-52 weeks after absorption of yolk sac

F(f) - 1-2 years from date of hatch

G(g) - 2-3 years from date of hatch

H(h) - 3 years or more from date of hatch

RELEASE SITES AND CATEGORIES

The name of each release site or location is listed under the heading "BODY OF WATER" in Table 4. Each release site has been assigned a unique numerical code, which can be used to obtain latitude and longitude of the site if required. Assignment and use of these code numbers has previously been described (Alexander 1975).

Release sites have also been categorized to permit additional summaries of the data in Table 3. Category words used with the term "RELEASE SITES" in the heading of Table 3, are defined as follows:

PUBLIC: Most release sites are classified as public. These sites are normally accessible to the public in general, and fish released are expected to be available to the public at some time after distribution.

AQUACULTURE: Permits have been issued under authority of the Minister of the Department of Fisheries and Environment to individuals rearing salmonids for commercial purposes. Fish sold to these individuals are not normally available for exploitation by the public.

PRIVATE: Small fish, surplus to the rearing requirements of the Freshwater and Anadromous Division, are available

for sale to the public. These fish are to be distributed to private-water ponds defined as: a body of water completely enclosed by land owned by the applicant and having no inlet or outlet off that property, or one in which the inflow and outflow is through a "pipe". No fish culture permit is required for this stocking and, although public access is not legally restricted, it is not readily available. These waters would not normally qualify for fish distribution under public-water stocking.

RESEARCH: Fish distributed to University and government laboratories for research and/or testing are not available to the public, and are therefore placed in this separate category. However, fish used in research programs but released in waters accessible to the public are categorized as public-water stocking.

SPECIAL: The Freshwater and Anadromous Division annually provides salmonids to the Fish and Wildlife Branch of the Department of Lands and Forests in Nova Scotia and to the Fish and Wildlife Branch of the Department of Natural Resources in New Brunswick. Although these fish may eventually be used for public-water stocking, both agencies operate rearing facilities where fish may be held for a period of several days to many months prior to final distribution. The final destination of these stocks is controlled by the provincial agencies. These fish are categorized as "SPECIAL" distribution when leaving the culture facilities of the Freshwater and Anadromous Division.

ALL: Fish in this category summary include fish in all other categories.

MARK

This information is provided in Table 4 for each distribution to each location. Code numbers used for marks on fish distributed during 1976 and 1977 are interpreted as follows:

01 - Unknown or uncertain at the time of record. Since the record of marking data was new to fish culture personnel in 1976, some uncertainties resulted. This code was provided in order to reduce the chance of erroneous records but is used sparingly after 1976.

02 - no mark or tag.

03 - adipose fin clip only.

04 - right pelvic fin clip only.

05 - left pelvic fin clip only.

07 - adipose and right pelvic fin clips.

08 - adipose and left pelvic fin clips.

10 - right pectoral fin clip only.

11 - left pectoral fin clip only.

13 - adipose and right pectoral fin clips.

16 - numbered jaw tag only.

21 - adipose fin clip and Carlin tag.

23 - magnetic nose tag and adipose fin clip.

24 - magnetic nose tag plus Carlin tag and adipose fin clip.

25 - adipose and left pelvic fin clips, plus jaw tag.

26 - adipose and right pelvic fin clips, plus jaw tag.

27 - left pelvic fin clip, plus Carlin tag.

28 - left pectoral fin clip, plus jaw tag.

STOCK

In Table 4, stock description has been shown for each location as a three-digit numerical code after species. The stock description is provided (Appendix) for each code used in this record.

RESULTS

The 1977 salmonid distributions are summarized in several forms (Tables 1-3). Detailed information on salmonid distributions to all locations is also provided in an orderly form for both 1976 and 1977 (Table 4). Table titles and sub-titles, viewed in light of the information provided on codes and abbreviations, are considered to be self-explanatory.

Note that the single small distribution of trout from Cardigan Fish Culture Station in 1977 has been omitted from some summaries (eg., Table 2) because of rounding off within the computer program.

APPENDIX

STOCK DESCRIPTION FOR CODES USED IN REFERENCE TO SALMONID DISTRIBUTIONS FROM FISH CULTURE STATIONS OPERATED BY THE FRESHWATER AND ANADROMOUS DIVISION, RESOURCE BRANCH, 1976 AND 1977

Code	Stock description
001	Fall-spawning rainbow trout reared from imported eggs.
002	Fall-spawning rainbow trout reared from eggs produced by stock maintained at Cobequid F.C.S.
005	Domestic stock - Antigonish brook trout.
006	Domestic stock - Saint John brook trout.
010	Brook trout, hybrid strain - FI generation produced by crossing domestic females with wild males from Flat Lake.
011	Brook trout, domestic (Antigonish) stock - from eggs produced by broodstock maintained at Yarmouth.
013	Brook trout, hybrid strain - FI generation produced by crossing domestic females with wild sea-run males collected from East River Sheet Harbour, Nova Scotia.
100	Lake trout from eggs produced by wild lake trout collected at Baker Lake, New Brunswick.
101	Lake trout produced from eggs imported from domesticated stocks held in U.S.A. - Marquette State Hatchery, Michigan.
126	Landlocked salmon from eggs produced by wild stocks collected from Long Lake, New Brunswick.
203	St. Mary's River - East Branch - Mixed runs.
207	St. Mary's River - West Branch - Late run.
213	St. Mary's River - Mixed Branch origin - Mixed runs.
263	LaHave River - Main - Mixed runs.
269	LaHave River - General - Mixed runs.
320	LaHave River - General - Mixed runs - Recycled kelts.
321	East River Sheet Harbour - General - Mixed runs - Recycled kelts.
330	Saint John River (wild) - Spring run.
331	Saint John River (wild) - Summer run.
333	Saint John River (wild) - Mixed runs.
334	Saint John River (hatchery-return parentage) - Spring run.
335	Saint John River (hatchery-return parentage) - Summer run.
336	Saint John River (hatchery-return parentage) - Fall run.
337	Saint John River (hatchery-return parentage) - Mixed runs.
341	Saint John River (hatchery-return x wild) - Mixed runs.
342	Saint John River (90% hatchery x 10% wild) - Spring run.
343	Saint John River (hatchery-return) - Uncertain run.
344	Saint John River (uncertain parentage) - Uncertain run.
360	Margaree River - Early run.
401	Miramichi River - Millbank - Late run.
404	Miramichi River - Northwest (Strathadam) - Early run.
406	Miramichi River - Hatchery-return parentage - Early run.
412	Miramichi River - Southwest (Rocky Brook) - Early run.
415	Bartholomew River - General - Late run.
441	Restigouche River - General - Early run.
450	Bay Chaleur - Dalhousie trap - Early run.
460	Waweig River - General.
