Note: The Summary serves as a tool for filing and Compilation of archive data where little or no analysis is included. This report is not intended for general distribution and the contents must not be referred to in other publications without prior written clearance from the Department of Fisheries and Oceans, Field Services Branch, Inspection Division.

1983 SUMMARY OF PARALYTIC SHELLFISH
TOXICITY RECORDS IN THE PACIFIC REGION

1983 was a quiet year in terms of PSP activities. No illness attributable to PSP was reported, not even from recreational diggers. All blooms detected were of low intensity and sporadic in nature. PSP activities in the inside waters between Vancouver Island and the Mainland (Areas 12 to 20) may be highlighted by two periods - the middle of June and the end of August. The first one resulted in the closure of Area 18 on June 30th, where the mussels reached 370ug/100g at Cabbage Is. The second one resulted in brief closures in Areas 13, 14, 15, and 16 where PSP levels ranging from 380 to 670 ug/100g were detected during the last week of August.

The absence of major PSP blooms is responsible for a 43% increase in commercial clam landings in 1983, yielding a total volume of 1,693 metric tonnes (preliminary figure). Although El Nino did change the migratory path of the Pacific salmon in 1983, it did not exert any observable immediate effect on Gonyaulax activities.

It is worthy to note that rock scallops in the Queen Charlotte Islands (Area 2) continued to show high toxin levels throughout the year. The adductor muscles did show positive levels ranging from 32 to 130 ug/100g.

Self-explanatory figures on the monthly PSP workload, the sample sources and origins, and PSP profiles of the mussel sampling stations in Pender Harbour, White Rock, Comox and Point-on-Point are included in this summary.

I would like to thank all field officers and laboratory staff for their cooperation and their contribution towards assuring public safety. My special thanks to the Alert Bay, Tofino, and Queen Charlotte City offices for their strong sampling efforts.

Rudy Chiang
Sanitary Shellfish Coordinator
