Yield-per-recruit Analysis for Cod in Div. 2J3KL

by

J. W. Baird and C. A. Bishop
Science Branch
Department of Fisheries and Oceans
P. O. Box 5667
St. John's, Newfoundland A1C 5X1

¹ This series documents the scientific basis for fisheries management advice in Atlantic Canada. As such, it addresses the issues of the day in the time frames required and the Research Documents it contains are not intended as definitive statements on the subjects addressed but rather as progress reports on ongoing investigations.

Research Documents are produced in the official language in which they are provided to the Secretariat by the author.

¹ Cette série documente les bases scientifiques des conseils de gestion des pêches sur la côte atlantique du Canada. Comme telle, elle couvre les problèmes actuels selon les échéanciers voulus et les Documents de recherche qu'elle contient ne doivent pas être considérés comme des énoncés finals sur les sujets traités mais plutôt comme des rapports d'étape sur les études en cours.

Les Documents de recherche sont publiés dans la langue officielle utilisée par les auteurs dans le manuscrit envoyé au secrétariat.

Abstract

Yield-per-recruit analyses were conducted for Div. 2J3KL cod using various age ranges and average weights at age. The partial recruitment used was that from the most recent assessment and the natural mortality was assumed to be 0.20. $F_{0.1}$ and F_{max} values using these data ranged from 0.16 to 0.24 and 0.31 to 0.51 respectively. A range of ages from 1 to 16, with any of the other described parameters, gives an $F_{0.1}$ value of about 0.20.

Résumé

On a effectué des analyses du rendement par recrue dans les stocks de morue des divisions 2J3KL, en utilisant divers groupes d'âge et poids moyens selon l'âge. On s'est servi du recrutement partiel provenant de l'évaluation la plus récente et on a postulé une mortalité naturelle de 0,20. Dans ces conditions, les valeurs $F_{0.1}$ et F_{max} s'échelonnaient de 0,16 à 0,24 et de 0,31 à 0,51 respectivement. Considérant une fourchette d'âges allant de 1 à 16, et n'importe lequel des autres paramètres décrits, on obtient une valeur $F_{0.1}$ d'environ 0,20.

Yield per Recruit Analysis

An $F_{0.1}$ reference level of 0.20 has been used in the past for projections of catch for NAFO Division 2J3KL cod. Yield-per-recruit analysis for this cod stock using various input parameters are presented in this paper.

The catch at age for 2J3KL cod for the 1962-88 period is given in Table 1. Throughout the 1960s and into the 1970s, substantial numbers of cod of age 16 and older occurred in the commercial fishery; but since the extension of jurisdiction (1977), there have been relatively few cod caught above age 16. For sequential population analysis during the last assessment of this stock (Baird and Bishop, 1989), the maximum age used was 14.

Mean weights at age (Table 2) for this stock indicate that weights were at their lowest in the early 1970s, increased to a high in the late 1970s--early 1980s, and subsequently declined. Illustrations of this for ages 4, 8, and 12 are presented in Figures 1-3 respectively. Three periods were used to obtain input weights at age for yield per recruit analyses: 1973-75, 1979-81, and 1986-88 (Table 3; Figs. 4-6). For each of these weight vectors, subjective smoothing was used to obtain estimates for age 1 and ages greater than 15.

An examination of partial recruitment vectors for approximately the same periods selected for the average weights, indicated little change from the PR used in the most recent assessment. One notable exception was the proportion recruited to the commercial fishing gear at age 7 which was lower in the 1974-75 period than the two subsequent periods (Table 4).

A summary of input parameters used for yield per recruit calculations are as follows:

- (1) Age range: 1-20, 1-16, 1-14
- (2) Average weight at age: 1973-75, 1979-81, 1986-88
- (3) Partial recruitment: Used in most recent assessment for 1988
- (4) Natural mortality: 0.20

The results of these analyses are given in Table 5. $F_{0.1}$ values range from 0.16 to 0.24 while F_{\max} values range from 0.31 to 0.51. The parameter with the largest influence on the estimation of the $F_{0.1}$ and F_{\max} reference levels was the age range with the range from 1 to 16 giving $F_{0.1}$ levels similar to those used in the past (Fig. 7).

NOTE - AVERAGE WEIGHTS OF 0.00 INDICATE NO CATCH.

Table 3. Mean weights for Div. 2J3KL cod averaged over the three year periods indicated. (Estimates derived from subjective smoothing.)

Age	1973-75 Estimates	1979-81 Estimates	1986-88 Estimates
1	-	0.15	-
2	0.19	0.41	0.28
3	0.37	0.51	0.48
4	0.59	0.76	0.70
5	0.86	1.15	1.05
6	1.08	1.67	1.41
7	1.32	2.36	1.79
8	1.70	3.33	2.15
9	2.15	4.41	2.74
10	2.73	5.35	3.32
11	3.22	6.27	4.31
12	3.62	7.32	4.86
13	4.74	8.22	5.84
14	5.51	9.53	7.21
15	6.25	9.92	9.98
16	6.00	7.00	12.04
17	8.51	7.80	11.43
18	10.49	8.50	13.58
19	7.62	8.90	12.46
20	17.46	9.00	12.91
			13.00
			13.00
			13.58
			13.50

Table 4. Partial recruitments for Div. 2J3KL cod
for various time periods indicated.

Age	1974-75	1979-81	1988
3	0.02	0.03	0.02
4	0.14	0.19	0.21
5	0.37	0.46	0.37
6	0.53	0.62	0.58
7	0.69	0.81	0.85
8	1.00	1.00	1.00
9-20	1.00	1.00	1.00

Table 5. Results of a series of yield per recruit analyses for
Div. 2J3KL cod.

Years	Age range					
	1-20		1-16		1-14	
	F _{0.1}	Y/R (kg)	F	Y/R (kg)	F	Y/R (kg)
1973-75	F _{0.1}	0.169	0.332	0.206	0.333	0.244
	F _{max}	0.385	0.364	0.440	0.362	0.509
1979-81	F _{0.1}	0.170	0.593	0.198	0.591	0.227
	F _{max}	0.311	0.638	0.342	0.631	0.382
1986-88	F _{0.1}	0.158	0.431	0.198	0.428	0.243
	F _{max}	0.340	0.469	0.411	0.465	0.495
