## ABSTRACT

In May, 1995, the Department of Fisheries and Oceans, in cooperation with all federal, provincial and territorial licensing agencies (except Ontario), undertook the 1995 Survey of Recreational Fishing in Canada.

Information on angling in Canada has been collected at five-year intervals since 1975. Since 1980, the Great Lakes Fishery Commission has requested that information specific to the Great Lakes system be developed in order that they could determine the economic importance of this fishery. This request was made of both the Department of Fisheries and Oceans and the Fish and Wildlife Service of the United States Department of the Interior since national surveys were being conducted by both agencies.

The surveys are no longer carried out in the same year. Canada has maintained the original five-year interval whereas in the U.S., the survey is conducted to coincide with census years.

Data has been generated to reflect activity by both residents of the province and visitors who fished in Ontario and, more specifically, on the Great Lakes.

RÉSUMÉ

En may, 1995 , le ministère des Pêches et des Océans, de concert avec tous les organismes fédéraux, provinciaux (à l'exception de l'Ontario) et territoriaux chargés de délivrer les permis, a réalisé l'Enquête sur la pêche récréative au Canada en 1995.

L'information sur la pêche récréative au Canada est recueillie aux cinq ans depuis la première enquête en 1975. La Commission des pêcheries des Grands Lacs a réclamé depuis 1980 des données particulières aux Grands Lacs afin de pouvoir établir l'importance économique de la pêche qui s'y pratique. Cette demande a été faite au ministère des Pêches et des Océans et au Fish and Wildlife Service du Département de l'Intérieur des États-Unis, les deux organismes chargés des enquêtes nationales.

Les enquêtes des deux pays n'ont plus lieu la même année. Le Canada continue de suivre son plan quinquennal tandis qu'aux États-Unis, l'enquête coïncide avec le recensement.

Les résultats reflètent la pêche récréative pratiquée par les Ontariens et les visiteurs en Ontario, et plus spécifiquement, dans les Grands Lacs.

## 1. Data Source

The tables and charts presented in this report have been prepared using data from the Ontario component of the 1995 Survey of Recreational Fishing in Canada, a nationally coordinated study conducted at five-year intervals in all provinces and territories. The purpose of the survey is to provide data on a wide variety of topics of interest to fisheries managers at the various levels of government. The results presented in this report reflect data specifically defined for the Great Lakes Fishery.

## 2. Definition of "Great Lakes Areas"

Anglers were asked to provide the name of the lake, river or stream on which they fished, the nearest town or village, the number of days fished, the number of fish caught and kept by species as well as other attitudinal and socio-economic information regarding their fishing activities. Estimates for Great Lakes waters were produced using the geographic coding used to identify each town, grouped according to their proximity to Great Lakes waters. The areas defined by the grouped codes form a continuous border along the system, generally one township deep ( 8 to 24 kilometres). This definition was used to facilitate comparison with the broader definition used in the United States survey. Individuals fishing tributaries of the Great Lakes further inland than defined by the geographic coding are not included as participants in the Great Lakes fishery.

A map detailing Great Lakes areas is provided in Appendix 1. Specifically, the areas are defined as follows:

St. Lawrence River: East of Gananoque to the Ontario-Quebec border.
Lake Ontario: West from Gananoque to the Niagara peninsula, including the Niagara River to the eastern edge of the city of Fort Erie.

Lake Erie: West from Fort Erie to Amherstburg.
Lake St. Clair: $\quad$ North from Amherstburg to the southern edge of Sarnia (including the Detroit and St. Clair rivers).

Lake Huron: From Sarnia north to Sault Ste. Marie including the St. Mary's River.

Lake Superior: From north of Sault Ste. Marie to the Ontario-Wisconsin border.

## 3. Estimates of Effort and Numbers of Anglers

All estimates of effort and numbers are for adults (18 years of age and over). Averages for each lake are based on the numbers of participants determined for each, while those for the system as a whole are based on the total number of participants on any of the lakes in the system (see Table 1). Information in tables referring to totals for Ontario is based on the activities of Great Lakes anglers only. This information is presented in order to reflect the relative degree of importance associated with the Great Lakes when compared to all fishing activities of Great Lakes anglers in Ontario.

## 4. Expenditures

Although expenditures were collected on a household basis, allocation for the Great Lakes system was based on the fishing activity of individuals. The following procedure was used:

- if all days were spent on the Great Lakes system, all expenditures were assigned to the system. Expenditures for each water body within the system were allocated on the basis of the proportion of time spent on each water body.
- if the days spent on the Great Lakes system represented only a subset of all days in Ontario, the portion of the expenditures to be assigned to the system was estimated using the proportion of activity on the system. Estimates by water body within the system were then allocated on the basis of the amount of activity on each as a percentage of all days on the Great Lakes system.

## 5. Major Purchases and Investments, Package Deals

In the 1985 report on the Great Lakes fishery, no attempt was made to allocate expenditures made on major purchases and investments or package deals insofar as such purchases could not be "attributed" to Great Lakes fishing. This position was reconsidered in 1990 and was maintained for this report. Expenditures for major purchases and investments have been provided using the allocation of expenditure dollars described above. This has been done both for expenditures made in whole or in part for recreational fishing and for the estimated amount directly attributable to recreational fishing. Expenses incurred for package deals have been allocated on the basis of only those packages purchased specifically on each of the Great Lakes.

## 6. Willingness to Pay

In both 1990 and 1995, anglers were asked how much they were willing to pay per day, over and above their direct expenditures, before deciding it would have been too expensive to fish the same number of days. The question was based on increased costs for services required for fishing (accommodation, gasoline, supplies, etc.), not for licence fees or similar access charges. For respondents indicating a willingness to pay additional costs, options on a daily amount were provided for a specified amount under $\$ 10, \$ 10$ per day, amounts in $\$ 10$ increments to $\$ 100$ and then, a specified amount more than $\$ 100$ per day. Since the question covered the entire fishing experience in Ontario, it is recognized that the allocation per day within the Great Lakes system may not reflect the willingness to pay had the question been specific to the Great Lakes. The estimates are being provided in order to give the reader some indication of the additional amounts over and above expenses incurred in 1995 for Great Lakes fishing that anglers might be prepared to pay.

## 7. Attitudes

In this report two tables are provided which reflect anglers' behavioural predispositions with respect to the choice of a place to fish and the reasons why they fish where they do. Anglers were asked to rate options on a scale of 1 (not important) to 5 (extremely important). As with willingness to pay, these questions were general and did not ask for attitudes with respect to Great Lakes fishing. They are presented solely as indicators of the attitudes of anglers who fished on the Great Lakes.

## 8. Data Processing and Data Availability

Standard coding and editing procedures used in the 1995 Survey of Recreational Fishing in Canada were used to prepare the data in this report. Data was analysed using SPSS/PC Version 8.0. System files and raw data files can be generated for analysis.

## 9. Reliability

Because the information provided in this report is a subset of a larger survey, the reliability of the data should be considered when making statements with respect to the data. It should be noted that all data are presented without rounding to the nearest hundred or thousand. This is not intended to reflect the degree of reliability of the data but was done in this way to facilitate production of tables to reflect data generated from the system. A table indicating the reliability of key variables (as coefficients of variation) is provided in Appendix 3. The sampling methodology had to be modified in 1995. Anglers were chosen from the "Outdoors Card" database instead of the usual telephone interview method. This no longer permits comparisons with previous reports.

## HIGHLIGHTS

- an estimated 552,710 anglers fished on the Great Lakes in 1995; 485,096 residents of Ontario and 67,614 visitors to Ontario, primarily from the United States
- Great Lake anglers were primarily male ( $85 \%$ ), between 35 and 44 years of age ( $26.8 \%$ ), with a college education (36.9\%), employed full-time (70.1\%) and with personal income between $\$ 20,000-49,999$ ( $51.8 \%$ ) and household incomes between $\$ 40,000-59,999$ (30.9 \%)
- Great Lake anglers fished for over 7 million days, with residents averaging 12.0 days and non-residents 7.1 days
- most days were spent fishing on Lake Huron (2.6 million) followed by Lake Ontario (2.1 million)
- Great Lakes anglers caught a total of 47.3 million fish of all species of which 32.6 million were in the Great Lakes System
- of all fish retained on the Great Lakes, perch ranked first in terms of numbers at 13.5 million, followed in order by smelt ( 7.7 million), walleye ( 5.3 million) and smallmouth bass ( 5.2 million)
- on average anglers retained 22 fish each from the Great Lakes of which $62 \%$ were smelt and perch. This amounts to $41 \%$ of all fish caught
- Great Lakes anglers kept over $50 \%$ of only three species: smelt (77\%), splake (72\%) and Coho salmon (65\%)
- Great Lakes anglers spent an estimated $\$ 284$ million on durable goods used in whole or in part for recreational fishing, allocated on the basis of their Great Lakes fishing activity
- of this amount, they attributed $\$ 142$ million (50\%) wholly to their recreational fishing activities
- Great Lakes anglers spent $\$ 220$ million on goods and services directly related to their fishing activities, averaging almost $\$ 397$ per angler
- these anglers further indicated they were willing to pay an additional $\$ 131$ million, had costs been higher for service-related expenses, before they would have stopped fishing
- these additional costs averaged $\$ 238$ per year, or $\$ 19$ per day

## DEFINITIONS

## Definitions

Great Lakes Angler

Origin

Day Fished

Total Investment Expenses

Attributable Investments

Direct Expenditures

Equipment//Supplies
an angler who fished at least one day on any of the Ontario waters of the Great Lakes or to an inland distance of 20 kms on any rivers and streams terminating in the Great Lakes
resident is an angler who resided in the province of Ontario and a nonresident is an angler who visited Ontario: a Canadian (from another province/territory) or a non-Canadian
a "day of fishing" is defined as all or part of any day on which recreational fishing activity occurred
these are investment expenditures for durable goods (boats, motors, campers, fishing equipment, special vehicle, etc.), which have been allocated to the Great Lakes based on the time the angler spent on the Great Lakes in 1995as a percent of all days fished in the province
the amount of the investment expenditures for durable goods which the angler identified as being wholly attributable to recreational fishing activity (as a percentage of the total) and which have been allocated to the Great Lakes based on the time the angler spent on the Great Lakes in 1995as a percent of all days fished in the province
these are expenditures for goods and services (food, camping, accommodation, transportation, supplies, etc.) incurred when on fishing trips or excursions which have been allocated to the Great Lakes on the prorated basis described above
there is a distinction between these two categories insofar as fishing equipment is defined to be expenditures on such durable goods as fishing rods, reels, depth finders, etc. and fishing supplies are items purchased in the course of fishing activity such as bait, lures, line, etc.
the maximum amount of money an angler was willing to pay per fishing day, for the same number of days fished, had costs increased due to higher costs for services such as gasoline, food, etc. (allocated for each day fished on the Great Lakes)

# ESTIMATES OF STATISTICAL RELIABILITY FOR KEY VARIABLES 

Estimates of Statistical Reliability of Selected Variables
Expressed as Coefficients of Variation ${ }^{1}$
All Anglers, 1995

| Characteristics | Lake Ontario | Lake Erie | Lake St. Clair | Lake Huron | Lake Superior | St. Lawrence River | Great Lakes System |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Sample Size | 470 | 122 | 34 | 518 | 157 | 111 | 1,302 |
| Days of effort | 7.9\% | 9.6\% | 28.1\% | 7.4\% | 10.0\% | 11.9\% | 4.4\% |
| Total Fish Caught | 10.9\% | 15.7\% | 39.7\% | 14.9\% | 15.3\% | 23.3\% | 7.7\% |
| Total Fish Kept | 12.8\% | 18.4\% | 40.0\% | 24.1\% | 17.4\% | 40.3\% | 13.3\% |
| Total investments | 18.0\% | 33.1\% | 79.9\% | 33.3\% | 43.2\% | 76.6\% | 23.3\% |
| Total attributable investments | 18.7\% | 29.4\% | 55.9\% | 31.8\% | 31.9\% | 40.0\% | 16.5\% |
| Direct expenditures | 8.9\% | 15.4\% | 46.2\% | 7.5\% | 13.2\% | 16.2\% | 4.5\% |
| Willingness to Pay | 12.7\% | 16.3\% | 30.9\% | 13.9\% | 13.9\% | 19.6\% | 7.8\% |

1 The coefficient of variation of the mean is used as a crude measure of reliability because it is not possible to calculate exact variability in the data. It is calculated as the standard error of the mean divided by the mean multiplied by 100. The table below can be used as a guide to the use of estimates based on the coefficient of variation.

CV less than 16.5\%:
CV greater than 16.5\% and less than 33.5\%:
CV greater than 33.5\%:

- estimates can be used without condition
- estimates should be used with caution.
- estimates should be used with extreme caution.

## RESIDENT AND NONRESIDENT QUESTIONNAIRES

# 1995 SURVEY OF RECREATIONAL FISHING IN CANADA 

RESIDENTS OF ONTARIO
(Le présent questionnaire est également disponible en français)
(QUESTIONS? $\rightarrow 1$ (800) 869-9451 TOLL FREE)

## INSTRUCTIONS TO RESPONDENTS

In order to complete this document as easily as possible, the following instructions may be of assistance:

- the questions are to be answered only by the person to whom the questionnaire was addressed.
- this survey covers only fishing activity between January 1 and December 31, 1995.
- the term "household members" refers only to individuals living in your residence.

> THANK YOU IN ADVANCE FOR YOUR COOPERATION AND ASSISTANCE.

## CONFIDENTIAL WHEN COMPLETED

## LICENCE INFORMATION

1. Which Ontario outdoors cards and recreational fishing licences did you personally hold in 1995 ?

## Outdoors Cards

Fishing only $\quad, \mathrm{O} \quad$ Fishing and hunting $\quad{ }_{2} \mathrm{O}$

## Fishing Licence

Seasonal licence ${ }_{1} \mathrm{O}$ Conservation licence ${ }_{2} \mathrm{O}$ Did not purchase a fishing licence ${ }_{3} \mathrm{O}$
If you purchased an outdoors card exclusively for hunting activity and you did not fish in 1995, please return this questionnaire in the postage-paid envelope.

## YOURPERSONALRECREATONA FISHING ACTMIIES

2a) Did you personally fish for recreation in Ontario in 1995?

$$
\mathrm{Yes}_{1} \mathrm{O} \rightarrow \text { please continue } \quad \mathrm{No}_{2} \mathrm{O} \rightarrow \text { go to question } 8
$$

b) How many days in total did you spend fishing for recreation in Ontario in 1995 ? $\qquad$ days fished (A "day" is all or any part of a day fished)
c) Of the above days, how many were spent fishing through the ice in Ontario in 1995?

$$
\text { None } \mathrm{O} \quad \mathrm{OR} \quad \text { ___ days fished }
$$

d) On average, how many hours per day did you fish for recreation in Ontario in 1995? $\qquad$ hours per day

3a) For each water body on which you fished in Ontario in 1995, please provide the location, the number of fishing trips, the days fished and the number of fish you caught and kept. If you fished in a provincial park, please name the park instead of the nearest town/village. Even if you did not catch any fish, the information on where you fished and how often is important.

Please include only your personal fishing activities.
