1994 SUMMARY OF MARINE TOXIN RECORDS
IN THE PACIFIC REGION

GENERAL

Overall, the PSP activity in 1994 was calculated to be 6.3, nearly a threefold increase over last year's 2.3.

Bloom activity was most significant in the late summer and fall months. There were two smaller bloom periods in April and July.

The 62 mussel monitoring stations in the South Coast in 1994 were the same locations as the previous year. There were 15 sites set up in the Queen Charlotte Islands in the North Coast which were monitored for the rotational geoduck fishery. As well, razor clam monitoring on Graham Island at North and South Beaches continued in 1994. Monitoring of the Central Coast continued at the same 11 sites as in 1993 until November when the Odin Cove site was replaced with Troup Passage and the Gale Passage site replaced by Reid Passage.

There was a decline in the number of samples analysed in 1994 with 3,434 samples analysed for PSP and 2,705 for domoic acid analysis.

PSP BLOOMS

AREA 1 to 10

In the North Coast, razor clams from 1-5, North and South Beaches, on Graham Island showed no PSP activity in 1994. There was some PSP activity seen in the Central Coast with one bloom which began at the beginning of May which ended mid-July and a second, more extensive bloom, which was first detected in the second week of September and continued into the first week of November. The areas affected the most were in the southern portion of Area 7 where levels as high as 740 ug/100g at 7-23, Gow Island, and 620 ug/100g at 7-17, Lizzie Cove, were seen at the end of September.

AREA 12

For the eighth consecutive year a PSP bloom occurred in the northwestern portion of Area 12 in April. PSP was detectable in mussel samples up to the middle of October and reached a peak level of 10,000 ug/100g at the end of April at 12-43, Ellen Point, in Kingcome Inlet. The lower portion of Area 12

showed a milder bloom in July which ended in mid-October with levels reaching 500 ug/100g at 12-17, Cluxewe Beach, in the middle of August.

AREA 13, 14 and 15

Area 13 and 14 showed a moderate bloom which started at the beginning of June and lasted till the end of July with levels reaching 220 ug/100g at 13-12, Surge Point, and at 14-14, Comox. Blooms of this nature are not unusual in Area 13 but are seldom seen in Area 14. Some PSP activity was detected in Area 15 with levels only reaching 56 ug/100g at 15-4, Okeover Inlet, at the end of May.

AREA 16

A major bloom occurred in the fall and winter months beginning in the second week of October and continued to the end of the year. PSP activity was recorded at all of the mussel monitoring stations. The highest level recorded was 1,600 ug/100g at the Egmont monitoring site in subarea 16-9.

AREA 17, 18 and 19

The southern Gulf Islands saw PSP bloom conditions starting as early as the third week of May at 18-7, Burgoyne Bay, and continued into the last week of October. All four mussel monitoring sites showed some level of PSP activity with 17-9, Vesuvius Bay, showing the highest in September at 1,000 ug/100g. The bloom was much more extensive than the previous year. Saanich Peninsula in, Area 19, showed bloom conditions similar to the previous year with PSP activity beginning in the third week of May and continuing to the end of October. The mussel monitoring station at 19-8, Patricia Bay, showed levels of 400 ug/100g in September.

AREA 20

A bloom was detected at the 20-4, Point No Point, mussel monitoring site in the last week of July which continued into the Fall. The highest level recorded at this site was 290 ug/100g in 1994.

AREA 23 to 27

The entire west coast of Vancouver Island was affected by two PSP blooms in 1994. The first bloom began in Area 24, Clayoquot Sound and spread to other areas by June. In most

areas the bloom had subsided in August but flourished into a major bloom by September; even more intensive than the spring bloom. Levels around late September reached as high as 1,500 ug/100g at 23-11, Spring Cove, 550 ug/100g at 24-2, Starling Point, 1,700 ug/100g at 25-6, Santa Gertrudis Cove, 1,500 ug/100g at 26-2, Rugged Point, and 320 ug/100g at 27-3, Forward Inlet, and 27-5, Klaskino Inlet.

DOMOIC ACID

General

There were 2,633 domestic and 72 import samples analyzed for domoic acid in 1994, just slightly more than the previous year. Domoic acid was detected in crabs, mussels, geoducks, oysters, littleneck clams and razor clams. Only one sample, dungeness crab, showed domoic acid over the 20 PPM tolerance level. The only closure as a result of domoic acid was in Area 27 for crabs in January.

Area 1 to 10

In the North Coast razor clams from 1-5, North and South Beaches showed domoic acid levels ranging from 0.3 to 2.1 PPM throughout most of the year. Mussels at 8-6, Port John, showed a level of 0.8 ppm on November 7, 1994.

Area 11 to 20

In the Gulf and Straits domoic acid was found in July in littleneck clams at 13-11, Kanish Bay, at 1.0 ppm. Oysters in Area 15 and 17 and mussels in Area 18 showed domoic acid of 0.3 ppm in July and May respectively.

Area 23 to 27

Domoic acid was detected in all statistical areas on the west coast of Vancouver Island. The highest level recorded in each area was 3.9 ppm (mussels), 2.6 ppm (crab), 4.8 ppm (mussels), 0.8 ppm (mussels) and 22.9 ppm (crab) at 23-7, Grappler Inlet, 24-6, Vargas Island, 25-6, Santa Gertrudis Cove, 26-2, Rugged Point, and 27-11 Holberg Inlet respectively.

Imports

One crab sample from the USA was found to have domoic acid at a level of 0.5 ppm.

MUSSEL MONITORING STATIONS

NORTH COAST

For the third consecutive year the Heiltsuk Band Council of Waglisla co-managed the mussel monitoring program DFO. The number of mussel monitoring stations was reduced in 1994 to 11 from 13 (see Figure 11). Mussel samples from monitoring stations in Area 7 and 8 were used to facilitate the commercial intertidal clam opening in Area 7.

Area 1 and 2, Queen Charlotte Islands, were co-managed with the Underwater Harvesters Association for the geoduck fishery. There were 15 stations set up (see figure 11) in 1994.

The Haida Band Council in Masset provided razor clam samples for monitoring the razor clam fishery at North and South Beaches on Graham Island.

SOUTH COAST

No changes were made in the number and location of the stations in the South Coast in 1994.

COMMERCIAL SAMPLES

There was a slight increase in the number of commercial samples analysed from 190 in 1993 to 214 in 1994 (see Table I). Quality Management Program (QMP) samples represented 100 of these samples.

The only product to show PSP levels over tolerance (80 ug/100g or more) were scallops. Other species which showed detectable levels of PSP but below tolerance were littleneck clams (6), oysters (1) and geoducks (2). The overall rejection rate for 1994 was only 0.5%. In 1994 there was a 0% rejection rate for commercial geoducks ; compared that of 5.9% in 1993 and 7.8% in 1992.

TABLE I: PS LEVELS IN DOMESTIC COMMERCIAL BIVALVE SAMPLES - 1994

SPECIES	(+) to 80	81 to 210	211 to 560	> 560	TOTAL
Manila & LN Clams	6	0	0	0	6
Razor Clams	0	0	0	0	0
Butter Clams	0	0	0	0	0
Oysters	1	0	0	0	1
Scallops	0	1	0	0	1
Mussels	N/A	N/A	N/A	N/A	N/A
Subtotal	7	1	0	0	8
Geoducks	2	0	0	0	2
TOTAL	9	1	0	0	10

Rejection Rates

o All bivalves : $1/214 = 0.5\%$ *including* geoducks

$1/203 = 0.5\%$ *excluding* geoducks

o Geoducks only : $0/11 = 0.0\%$

COMMERCIAL CLAM LANDINGS

There were three Areas which showed significant changes in the landings in 1994. In Area 1, the razor clam landings almost doubled in 1994 from 43.1 MT to 103.3 MT. In contrast, there was a decline in the landings in Areas 14 and 16. The PSP blooms in these Areas probably contributed to the decrease.

With the exception of the increased landings of razor clams in Area 1 there was little change in the landings by clam species.

REPORTED ILLNESSES

There were no reported illnesses in 1994.

ACKNOWLEDGEMENTS

Mussel samples have been provided for 12 consecutive years by the 1st Sooke Boy Scouts at Sooke, Ms. Vera Grafton at Egmont, Dr. Ian Whyte and staff at Departure Bay respectively.

The following DFO staff have also provided samples, sample analyses and assistance :

- o Mr. Tim Babiuk and Dave Graham and their staff in the Burnaby lab
- o Dr. Barbara Aweryn and her staff in the Chemistry lab
- o Mr. John Yarish and his staff in the Victoria lab
- o Inspection Officers
- o Fisheries Officers and patrol vessel crews

A special thanks to all of you for your cooperation without which the same degree of safety and confidence could not possibly be achieved.
