Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of the series reflects the broad interests and policies of Fisheries and Oceans Canada, namely, fisheries management, technology and development, ocean sciences, and aquatic environments relevant to Canada.

The correct citation appears above the abstract of each report. Each report is abstracted in the data base *Aquatic Sciences and Fisheries Abstracts*.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26-160 were issued as Department of Fisheries and Environment, Fisheries and Marine Service Data Reports. The current series name was changed with report number 161.

Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent de base à la compilation des données de classement et d'archives pour lesquelles il y a peu ou point d'analyse. Cette compilation aura d'ordinaire été préparée pour appuyer d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et politiques de Pêches et Océans Canada, notamment la gestion des pêches, la technologie et le développement, les sciences océaniques et l'environnement aquatique, au Canada.

Le titre exact figure au haut du résumé de chaque rapport. Les rapports à l'industrie sont résumés dans la base de données *Résumés des sciences aquatiques et halieutiques*.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement d'origine dont le nom figure sur la couverture et la page du titre.

Les numéros 1 à 25 de cette série ont été publiés à titre de Records statistiques, Service des pêches et de la mer. Les numéros 26-160 ont été publiés à titre de Rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom de la série a été modifié à partir du numéro 161.

ABSTRACT

Brown, T.M., Holbert, S., Gallilee, C.A., Colbourne, K. 2023. Sediment contaminant concentrations from outside Southern and Northern Resident Killer Whale Critical Habitat, British Columbia in 2020. Can. Data Rep. Fish. Aquat. Sci. 1372: ix + 42 p.

This study characterizes priority contaminants in the habitat of the *Endangered* Southern Resident killer whales (SRKW) and *Threatened* Northern Resident killer whales (NRKW) and their primary prey Chinook salmon. Surficial sediment samples ($n = 8$) were collected from outside SRKW and NRKW Critical Habitat (CH). Samples were analyzed for 13 contaminant classes: polychlorinated biphenyls (PCBs), polybrominated diphenyl ethers (PBDEs), polychlorinated dibenzo-*p*-dioxins (PCDDs), polychlorinated dibenzofurans (PCDFs), alkylphenols, Hexabromocyclododecane (HBCDD), legacy and current-use pesticides, Per- and polyfluoroalkyl substances (PFASs), pharmaceuticals and personal care products (PPCPs), Tetrabromobisphenol A (TBBPA), polycyclic aromatic hydrocarbon (PAHs), chlorinated paraffins (CPs), and metals.

Results reveal relatively higher average concentrations of PCBs, PBDEs, PCDDs, PCDFs, DDT, HCH, Chlordanes, Dieldrin, and Endrin and most metals, including arsenic (As), cadmium (Cd), copper (Cu), lead (Pb), mercury (Hg) and zinc outside CH compared to concentrations inside CH. Average PCB concentrations outside CH exceeded the PCB interim sediment quality guideline (0.0037 ng/g dw) deemed to be protective of resident killer whales. Average PBDE, PCDD, PCDF, Cd, Pb, and Hg sediment concentrations outside CH were below the PBDE interim sediment quality guideline (1 ng/g dw) protective of resident killer whales, the PCDDs and PCDFs (0.85 ng TEQ fish/kg), Cd (0.7 mg/kg dw), Pb (30.2 mg/kg dw), and Hg (0.13 mg/kg dw) CCME sediment quality guidelines to protect aquatic biota. Average As and Cu concentrations outside CH exceeded the CCME sediment quality guidelines for these two metals (7.24 and 18.7 mg/g dw, respectively). These high-resolution data for 13 contaminant classes are relevant to the protection and recovery of SARA-listed SRKW and NRKW.

RÉSUMÉ

Brown, T.M., Holbert, S., Gallilee, C.A., Colbourne, K. 2023. Sediment contaminant concentrations from outside Southern and Northern Resident Killer Whale Critical Habitat, British Columbia in 2020. *Can. Data Rep. Fish. Aquat. Sci.* 1372: ix + 42 p.

Cette étude caractérise les contaminants prioritaires dans l'habitat des épaulards *en voie de disparition* résidents du sud (ERS) et des épaulards *menacés* résidents du nord (ERN), ainsi que de leur principale proie, le saumon chinook. Des échantillons de sédiments de surface ($n = 8$) ont été prélevés à l'intérieur et à l'extérieur de l'habitat essentiel des ERS et ERN, puis analysés pour 13 classes de contaminants: polychlorobiphényles (BPC), polybromodiphényléthers (PBDE), polychlorodibenzo-p-dioxines (PCDD), polychlorodibenzofuranes (PCDF), alkylphénols, hexabromocyclododécane (HBCDD), pesticides anciens et actuels, substances perfluoroalkyliques et polyfluoroalkyliques (SPFA), produits pharmaceutiques et de soins personnels (PPSP), tétrabromobisphénol A (TBBPA), hydrocarbures aromatiques polycycliques (HAP), paraffines chlorées (PC) et métaux.

Les résultats révèlent des concentrations moyennes relativement plus élevées de PCB, de PBDE, de PCDD, de PCDF, de DDT, de HCH, de chlordanes, de dieldrine et d'endrine et de la plupart des métaux, y compris l'arsenic (As), le cadmium (Cd), le cuivre (Cu), le plomb (Pb), le mercure (Hg) et le zinc à l'extérieur de l'habitat essentiel comparativement aux sites situés à l'intérieur. Les concentrations moyennes de BPC à l'extérieur de l'habitat essentiel dépassaient le seuil de 0,0037 ng/g dw de la recommandation pour la qualité de l'environnement pour la protection des épaulards résidents et de leurs proies. Les concentrations moyennes de PBDE, PCDD, PCDF, Cd, Pb et Hg dans les sédiments à l'extérieur de l'habitat essentiel étaient inférieures aux seuils de la recommandation pour la qualité des sédiments pour la protection des épaulards résidents et de leurs proies et des recommandations canadiennes pour la qualité des sédiments du conseil canadien des ministres (CCME) de l'environnement pour les PBDE (1 ng/g ps), les PCDD et les PCDF (0,85 ng TEQ poisson/kg), le Cd (0,7 mg/kg ps), le Pb (30,2 mg/kg ps) et le Hg (0,13 mg/kg ps). Les concentrations moyennes d'As et de Cu à l'extérieur de l'habitat essentiel dépassaient les recommandations du CCME pour la qualité des sédiments (7,24 et 18,7 mg/g ps, respectivement). Ces données à haute résolution pour 13 classes de contaminants sont en lien direct avec la protection et le rétablissement des ERS et ERN, tous deux inscrits dans la *Loi sur les espèces en péril*.

1.0 Introduction

Environment and Climate Change Canada (ECCC) regulates Disposal at Sea (DAS) in Canadian waters, ensuring consistency with the Convention on the Prevention of Marine Pollution by Dumping of Wastes and Other Matter, 1972 (London Convention) and the 1996 Protocol to the Convention (London Protocol). Disposal at Sea is managed through a permit system under the *Disposal at Sea Regulations* under the *Canadian Environmental Protection Act* (CEPA 1999; Porebski and Osborne 1999). As part of its administration of Disposal at Sea activities, ECCC monitors sediment concentrations for contaminants of concern at representative disposal sites.

Fisheries and Oceans Canada (DFO) operates a Whale Contaminants Research Program which has implemented research and partnership initiatives to inform mitigation and recovery actions for the Endangered Southern Resident killer whales (SRKWs), including research to investigate contaminants of greatest concern to SRKWs and their prey. DFO is focusing research efforts on both SRKW and the Threatened Northern Resident killer whales (NRKW) and their prey in "critical" and surrounding habitats in partnership with First Nations, NGOs, universities, and other agencies. Research carried out under this program is providing guidance on the recovery of at-risk species identified under the terms of the *Species at Risk Act* (SARA).

DFO has partnered with ECCC's DAS program to study contaminant distribution in local resident killer whale habitats. DFO's National Contaminants Advisory Group (NCAG) has funded a contaminant sediment monitoring program (i.e., *PollutionTracker* Program) through partnerships with Ocean Wise Conservation Association. Together, this multi-sectoral effort will allow DFO to conduct a more rigorous risk-based evaluation of different contaminants in Southern Resident killer whale habitat, identify hot spots, and enable a prioritization of contaminants of concern to the whales and their prey. Further, this sediment data will be used in food web bioaccumulation models for killer whales and their prey (salmon) and will support the development of a protocol for the derivation of environmental quality guidelines for the protection of marine mammals from bioaccumulative substances. Collectively results from this work will contribute to the Government of Canada's initiative to implement measures for the protection and recovery of endangered SRKW.

Polychlorinated biphenyls (PCBs) were banned in Canada in 1977, but their legacy persists in environmental compartments and continued scrutiny is both required under CEPA Disposal at Sea regulations and warranted from an environmental health perspective. A prolonged period of exponential increases in polybrominated diphenyl ethers (PBDEs) in biota in the northeastern Pacific region (Rayne et al., 2003; Ross et al., 2013), and the increasing dominance of this contaminant in municipal wastewater (Dinn et al., 2012), marine water (Frouin et al., 2013), and marine sediments (Grant et al., 2011) in British Columbia has required that this contaminant class be assessed and monitored for any dredging and/or disposal of dredged material in SRKW Critical Habitat, as per draft joint DFO-ECCC SOP. Polycyclic aromatic hydrocarbons (PAHs), and metals are also assessed and monitored under CEPA Disposal at Sea regulations. Other pollutants, including Alkylphenols (APs), Per- and Polyfluoroalkyl Substances (PFASs), Pharmaceuticals and Personal Care Products (PPCPs), Chlorinated Paraffins (CPs), tetrabromobisphenol A (TBBPA), and legacy and current use pesticides have been highlighted in

the killer whale recovery strategy as chemicals of concern, which suggests that the assessment of sediment samples for these contaminants is warranted.

Sediment dredged from the lower Fraser River and other locations is periodically disposed of at marine sites in coastal British Columbia. Currently, the Disposal at Sea Regulations uses two Action Levels to evaluate material proposed for Disposal at Sea. The ‘Lower Level’ of the National Action List identifies screening criteria for specified substances to determine whether the material is acceptable for disposal (CEPA 2001; Environment Canada 2006). There are Lower Action Levels identified for the following substances: total PCBs at $100 \mu\text{g}\cdot\text{kg}^{-1}$ dry weight, mercury (Hg; $750 \mu\text{g}\cdot\text{kg}^{-1}$, dry weight), cadmium (Cd; $600 \mu\text{g}\cdot\text{kg}^{-1}$ dry weight), and total PAHs ($2,500 \mu\text{g}\cdot\text{kg}^{-1}$ dry weight) (Environment Canada 2006). Any sediments proposed for Disposal at Sea with concentrations above the Lower Levels of the National Action List must additionally be assessed with: (1) an acute lethality test, (2) two sub-lethal tests or (3) one sub-lethal test and one bioaccumulation test. If the acute lethality test or the other two tests fail to meet the criteria set out for those tests, then the sediments shall be considered to be above the Upper Level of the National Action List, and Disposal at Sea is prohibited (CEPA 2001; Environment Canada 2006).

Other criteria used for screening sediment for Disposal at Sea includes the Interim Sediment Quality Guidelines (ISQG) for the protection of aquatic biota developed by the Canadian Council of Ministers of the Environment (CCME) for the following five substances: arsenic at $7.24 \text{ mg}\cdot\text{kg}^{-1}$ dry weight, chromium at $52.3 \text{ mg}\cdot\text{kg}^{-1}$ dry weight, copper at $18.7 \text{ mg}\cdot\text{kg}^{-1}$ dry weight, lead at $30.2 \text{ mg}\cdot\text{kg}^{-1}$ dry weight, zinc at $124 \text{ mg}\cdot\text{kg}^{-1}$ dry weight, and polychlorinated dibenzo-*p*-dioxins (PCDDs) and polychlorinated dibenzofurans (PCDFs) at $0.85 \text{ ng TEQ fish/kg}$.

In addition, food web bioaccumulation modelling work led to the development of a PCB and PBDE concentrations in sediments of $0.0037 \mu\text{g}\cdot\text{kg}^{-1}$ dry weight (Alava et al. 2012; Lachmuth et al. 2010) and $1.0 \mu\text{g}\cdot\text{kg}^{-1}$ dry weight (Alava et al. 2016) that would reduce health risks to resident killer whales. These criteria are currently not used by the DAS Program to screen sediment. In accordance with the Standard Operating procedures developed with DFO, material is assessed and screened against background levels found at the disposal site.

This report provides a detailed summary of PCBs, PBDEs, PCDD/Fs, APs, Hexabromocyclododecane (HBCDD), legacy and current-use pesticides, Per- and polyfluoroalkyl substances (PFASs), PPCPs, TBBPA, PAHs, CPs, and metals in surficial sediment samples collected by Environment and Climate Change Canada and Fisheries and Oceans Canada in 2020 at eight sites located outside SRKW Critical Habitat. Contaminant concentrations are compared to concentrations reported in sediments collected in 2019 from within resident killer whale Critical Habitat. Contaminant analyses were carried out by SGS AXYS Analytical Ltd. in Sidney, BC. This data report represents the fourth such collaboration between ECCC and DFO on the monitoring of Disposal at Sea sites, with the first having evaluated PCBs, PBDEs, PCDDs and PCDFs from Point Grey and Sand Heads in the Strait of Georgia in 2010 (Ross et al. 2011), the second having evaluated the PCBs, PBDEs, PCDDs and PCDFs at Brown Passage and Douglas Channel in 2011 (Ross et al. 2012), the third having evaluated the same contaminants as this report but at sites located both within Disposal at Sea Sites at Point Grey and Sand Heads and inside and outside SRKW Critical Habitat (Brown et al.

2022) and is the second collaboration under the Government of Canada's Whale Initiative to inform priority contaminant actions for SRKWs.

2.0 Methods

2.1 Sample collection

A total of eight sediment samples were collected by ECCC and DFO staff from outside SRKW and NRKW Critical Habitat (Figure 1). Samples were collected using a Smith-McIntyre grab sampler aboard the Canadian Coast Guard Ship (CCGS) Vector July 28 to August 8, 2020, and using a Petit-Ponar grab sampler aboard a Hurricane rib September 20, 2020. Sample penetration was typically 10-15 cm for Smith-McIntyre and Petit-Ponar grab samples.

2.2 Sample analysis

A total of eight samples from outside resident killer whale (SRKW and NRKW) Critical Habitat were submitted to SGS AXYS Analytical Ltd. in Sidney, British Columbia, ALS Canada Ltd. in Burnaby, British Columbia, and Pacific Rim Laboratories in Surrey, British Columbia and analyzed for PCBs, PBDEs, PCDDs, PCDFs, alkylphenols, HBCDD, legacy and current-use pesticides, PFASs, pharmaceuticals and personal care products, TBBPA, PAHs, tributyltin (TBT), and metals (Table 1).

2.3 Data analysis

Values in summary tables (Tables 4 and 5) are presented on a dry weight basis and have been blank corrected. When congeners or analytes were undetected, detection limit substitutions were substituted with 0. Concentrations of sumPCBs denotes 159 congeners (1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12/13, 14, 15, 16, 17, 18/30, 19, 20/28, 21/33, 22, 23, 24, 25, 26/29, 27, 31, 32, 34, 35, 36, 37, 38, 39, 40/41/71, 42, 43, 44/47/65, 45/51, 46, 48, 49/69, 50/53, 52, 54, 55, 56, 57, 58, 59/62/75, 60, 61/70/74/76, 63, 64, 66, 67, 68, 72, 73, 77, 78, 79, 80, 81, 82, 83/99, 84, 85/116/117, 86/87/97/109/119/125, 88/91, 89, 90/101/113, 92, 93/95/98/100/102, 94, 96, 103, 104, 105, 106, 107, 108/124, 110/115, 111, 112, 114, 118, 120, 121, 122, 123, 126, 127, 128/166, 129/138/160/163, 130, 131, 132, 133, 134/143, 135/151/154, 136, 137, 139/140, 141, 142, 144, 145, 146, 147/149, 148, 150, 152, 153/168, 155, 156/157, 158, 159, 161, 162, 164, 165, 167, 169, 170, 171/173, 172, 174, 175, 176, 177, 178, 179, 180/193, 181, 182, 183/185, 184, 186, 187, 188, 189, 190, 191, 192, 194, 195, 196, 197/200, 198/199, 201, 202, 203, 204, 205, 206, 207, 208, 209), sumPBDEs denotes 40 congeners (7, 8/11, 10, 12/13, 15, 17/25, 28/33, 30, 32, 35, 37, 47, 49, 51, 66, 71, 75, 77, 79, 85, 99, 100, 105, 116, 119/120, 126, 128, 138/166, 140, 153, 154, 155, 181, 183, 190, 203, 206, 207, 208, 209), sumPFAS denotes 33 congeners (PFBA, PFeA, PFHxA, PFHpA, PFOA, PFNA, PFDA, PFUnA, PFDoA, PFTrDA, PFTeDA, PFBS, PFPeS, PFHxS, PFOS, PFNS, PFDS, PFDoS, 4:2 FTS, 8:2 FTS, PFOSA, N-MeFOSA, N-EtFOSA, MeFOSAA EtFOSAA, N-MeFOSE, N-EtFOSE, HFPO-DA, ADONA, 9Cl-PF3ONS, 11Cl-PF3OUdS), SumPAHs denotes 75 congeners (naphthalene, acenaphthylene, acenaphthene, 2-methylfluorene, C2 phenanthrenes/anthracenes, flourene, phenanthrene, C1 phenanthrenes/anthracenes, fluoranthene, pyrene, ben[a]anthracene, chrysene,

benzo[b]fluoranthene, benzo[j,k]fluoranthenes, benzo[e]pyrene, benzo[a]pyrene, perylene, dibenzo[a,h]anthracene, benzo[ghi]perylene, 2-methylnaphthalene, 1-methylnaphthalene, C1-naphthalenes, biphenyl, C1-biphenyls, C2-biphenyls, C2-naphthalenes, 1,2-dimethylnaphthalene, 2,6-dimethylnaphthalene, C3-naphthalenes, 2,3,6-trimethylnaphthalene, 2,3,5-trimethylnaphthalene, C4-naphthalenes, C1-acenaphthenes, C1-fluorenes, 1,7-dimethylfluorene, C2-fluorene, C3-fluorene, dibenzothiophene, C1-dibenzothiophenes, 2/3-methyldibenzothiophenes, C2-dibenzothiophenes, 2,4-dimethyldibenzothiophene, 4,6-dimethyldibenzothiophene, C3-dibenzothiophenes, C4-dibenzothiophenes, 3-methylphenanthrene, 2-methylphenanthrene, 2-methylantracene, 9/4-methlyphenanthrene, 1-methylphenanthrene, 3,6-dimethylphenanthrene, 2,6-dimethylphenanthrene, 1,7-dimethylphenanthrene, 1,8-dimethylphenanthrene, C3-phenanthrenes/anthracenes, 1,2,6-trimethylphenanthrene, retene, C4-phenanthrenes/anthracenes, C1-fluoranthenes/pyrenes, 3-methylfluoranthenes/benzo[a]fluorene, C2-fluoranthenes/pyrenes, C3-fluoranthenes/pyrenes, C4-fluoranthenes/pyrenes, C1-benzo[a]anthracenes/chrysene, 5/6-methylchrysene, 1-methylchrysene, C2-benzo[a]anthracenes/chrysene, 5,9-dimethylchrysene, C3-benzo[a]anthracenes/chrysene, C4-benzo[a]anthracenes/chrysene, C1-benzofluoranthenes/benzopyrenes, 7-methylbenzo[a]pyrene, C2-benzofluoranthenes/benzopyrenes, 1,4,6,7-Tetramethylnaphthalene) legacy pesticides (sumHCH denotes (alpha-, beta-, gamma-, delta-hexachlorocyclohexane); sumChlordanes denotes (alpha- and gamma-chlordanes; cis-nonachlor; trans-nonachlor; oxychlordanes; heptachlor epoxide); sumEndosulphan denotes (alpha-, gamma-endosulphan; endosulphan sulphate); sumDDT denotes dichlorodiphenyldichloroethane [2, 4'-DDD; 4, 4'-DDD]; dichlorodiphenyldichloroethylene [2, 4'-DDE; 4, 4'-DDE]; dichlorodiphenyltrichlorethane [2, 4'-DDT; 4, 4'-DDT]; hexachlorobenzene [HCB]; dieldrin); current-use pesticides (alachlor; sumEndrin denotes endrin ketone and endrin); sumHBCDD denotes alpha-, beta-, gamma-hexabromocyclododecane; sumPCDDs denotes 7 congeners (2,3,7,8-TCDD, 1,2,3,7,8-PECDD, 1,2,3,4,7,8-HXCDD, 1,2,3,6,7,8-HXCDD, 1,2,3,7,8,9-HXCDD, 1,2,3,4,6,7,8-HPCDD, OCDD) and sumPCDFs denotes 10 congeners (2,3,7,8-TCDF, 1,2,3,7,8-PECDF, 2,3,4,7,8-PECDF, 1,2,3,4,7,8-HXCDF, 1,2,3,6,7,8-HXCDF, 1,2,3,7,8,9-HXCDF, 2,3,4,6,7,8-HXCDF, 1,2,3,4,6,7,8-HPCDF, 1,2,3,4,7,8,9-HPCDF, OCDF); sumAlkylphenols (4-Nonylphenols, 4-Nonylphenol monoethoxylates, 4-Nonylphenol diethoxylates, 4-n-Octylphenol); sumCPs denotes (66 homologs: 21 short-chain (C10-C13), 28 medium-chain (C14-C17), 17 long-chain (C18-C20)).

Data presented in Tables 8-20 are presented on a dry weight basis with procedural blank subtraction only, with detection limit values indicated.

3.0 Results

PCBs were detected in all sediment samples ($n = 8$) outside SRKW and NRKW Critical Habitat (Table 8). Of the 159 congeners, 100 were detected in all of the samples. The top six PCB congeners outside resident killer whale Critical Habitat accounted for 26.5 % to 35.5 % of total PCBs in sediments. PCB-70 was found at the highest concentration, followed by PCB-118 at the West Coast Vancouver Island site (SKRW-20-001) and one of the central coast sites (SRKW-20-002) (Table 6, Figure 1). PCB-138 or PCB-153 was found at the highest concentration, followed

by either PCB-118 or PCB-153 at three of the central coast sites (SKRW-20-003, SKRW-20-004, SKRW-20-005) and the two Strait of Georgia sites (SKRW-20-006, SKRW-20-007). PCB-110, followed by PCB-138 and PCB-101 were the top three congeners at the Cowichan Bay site (COW-20-Sept). Average total PCB concentrations outside resident killer whale Critical Habitat (1.297 ng/g dw, Table 4) were slightly higher than the concentration in 2019 sediments from inside SRKW Critical Habitat (1.184 ng/g dw, Brown et al. 2022). Average concentrations outside critical habitat exceeded the interim sediment quality guideline (0.0037 ng/g dw) for PCBs protective of killer whales by 351-fold.

Of the 40 PBDE congeners, 10 were detected in all of the 8 samples. The top six PBDE congeners outside resident killer whale Critical Habitat accounted for 80.2 % to 99.4 % of total PBDEs in sediments. PBDE-47 was found at the highest concentration, followed by PBDE-99 or PBDE-154 at the West Coast Vancouver Island site (SKRW-20-001), three of the central coast sites (SRKW-20-002, SRKW-20-004, SRKW-20-005) and the Cowichan Bay site (COW-20-Sept) (Table 6, Figure 1). PBDE-209 was found at the highest concentration, followed by PBDE-47 at the two Strait of Georgia sites (SKRW-20-006, SKRW-20-007) and followed by PBDE-206 at one north coast site (SRKW-20-003). Average PBDE sediment concentration outside Critical Habitat (0.434 ng/g dw, Table 4) was slightly higher than average concentration in 2019 sediments from inside SRKW Critical Habitat (0.395 ng/g dw, Brown et al. 2022). Average concentrations outside critical habitat did not exceed the interim sediment quality guideline (1 ng/g dw) for PBDEs protective of killer whales (Table 6). However, one site, located on the north coast (SRKW-20-003), did exceed the guideline by 2.4-fold for PBDEs protective of killer whales (Figure 2).

The PCDD and PCDF concentrations were greatest in the two Strait of Georgia sites (SKRW-20-006, SKRW-20-007), followed by north coast site: SRKW-20-003 (Figure 2). Average PCDD (0.100 ng/g dw, Table 4) and PCDF (0.014 ng/g dw) sediment concentrations outside Critical Habitat were 1.7- and 2.7-fold higher, respectively, than the average concentrations in 2019 sediments from inside SRKW Critical Habitat (PCDD: 0.060 ng/g dw; PCDF: 0.005 ng/g dw, Brown et al. 2022). While average concentrations outside Critical Habitat were below the PCDD and PCDF CCME sediment quality guideline (0.00085 ng TEQ fish/g), the two Strait of Georgia sites (SKRW-20-006, SKRW-20-007) exceeded this sediment quality guideline by nearly one order of magnitude.

SumDDT concentrations were greatest in the two Strait of Georgia sites (SKRW-20-006, SKRW-20-007) and were at least one order of magnitude greater than the other sites (Figure 2). Average Σ DDT (0.092 ng/g dw, Table 4) sediment concentrations outside Critical Habitat were 1.2-fold higher than the average concentration in 2019 sediments from inside SRKW Critical Habitat (0.077 ng/g dw, Brown et al. 2022).

SumHCH concentrations were detected in four of the eight sites (Table 4). Average Σ HCH (0.025 ng/g dw, Table 4) sediment concentrations outside Critical Habitat were 1.8-fold greater than the average concentration in 2019 sediments from inside SRKW Critical Habitat (0.014 ng/g dw, Brown et al. 2022).

SumEndosulphan concentrations were detected in three of the eight sites (Table 4). Average Σ Endosulphan (0.030 ng/g dw, Table 4) sediment concentrations outside Critical Habitat were

2.4-fold lower than the average concentration in 2019 sediments from inside SRKW Critical Habitat (0.072 ng/g dw, Brown et al. 2022).

Dieldrin concentrations were detected in three of the eight sites (Table 4). Average dieldrin (0.004 ng/g dw, Table 4) sediment concentrations outside Critical Habitat were 8.7-fold higher than the average concentration in 2019 sediments from inside SRKW Critical Habitat (0.0008 ng/g dw, Brown et al. 2022).

HCB concentrations were detected in six of the eight sites (Table 4). Average HCB (0.024 ng/g dw, Table 4) sediment concentrations outside Critical Habitat were 1.3-fold lower than the average concentration in 2019 sediments from inside SRKW Critical Habitat (0.031 ng/g dw, Brown et al. 2022). TBBPA was not detected in any of the sediment samples outside resident killer whale Critical Habitat (Table 5).

Of the remaining legacy pesticides, Σ chlordanes, Σ endrin, and heptachlor were only present in two of the eight sites. Gamma-HBCDD and Alachlor were present in one of the eight sites. Only one of the 42 current-use pesticides, alachlor, was detected in one of the sediment samples (COW-20-Sept) outside Critical Habitat (Table 12).

SumAlkylphenol (APs) concentrations were greatest in the central coast site (SRKW-20-003), followed by the two Strait of Georgia sites (SKRW-20-006, SKRW-20-007) and central coast site (SRKW-20-002) (Table 4, Figure 2). Average Σ APs (1.208 ng/g dw, Table 4) sediment concentrations outside Critical Habitat were 8-fold lower than the average concentration in 2019 sediments from inside SRKW Critical Habitat (9.897 ng/g dw, Brown et al. 2022).

SumPAH concentrations were greatest in the central coast site (SRKW-20-003), followed by the two Strait of Georgia sites (SKRW-20-006, SKRW-20-007) (Table 4, Figure 2). Average Σ PAH sediment concentration outside Critical Habitat (259.6 ng/g dw) was 2-fold lower than the average concentration in 2019 sediments from inside SRKW Critical Habitat (1025 ng/g dw, Brown et al. 2022).

SumPFASs was only detected in six of the eight sites sampled, with the greatest concentrations found in the two Strait of Georgia sites (SKRW-20-006, SKRW-20-007) (Table 4). Average Σ PFASs sediment concentration outside Critical Habitat (0.452 ng/g dw) was 1.3-fold greater than the average concentration in 2019 sediments from inside SRKW Critical Habitat (0.357 ng/g dw, Brown et al. 2022).

Tributyltin (TBT) was not detected in any of the sediment samples outside resident killer whale Critical Habitat (Table 20).

Arsenic (As) concentrations were detected at all sites and were greatest at the north coast site (SKRW-20-003), followed by the two Strait of Georgia sites (SKRW-20-006, SKRW-20-007) (Table 5, Figure 3), with all of these sites exceeding the CCME sediment quality guideline for As (7.24 mg/kg dw) by up to 2.4-fold (Figure 3). Average As concentrations outside Critical Habitat (6.416 kg dw) were similar to the average concentration in 2019 sediments from inside SRKW Critical Habitat (6.350 mg/kg dw, Brown et al. 2022) and did not exceed the CCME sediment quality guideline (Figure 3).

Cadmium (Cd) concentrations were detected at all sites and were greatest at north coast site (SKRW-20-004), followed by the two Strait of Georgia sites (SKRW-20-006, SKRW-20-007) (Table 5, Figure 3). Average Cd concentrations outside Critical Habitat (0.3705 mg/kg dw) were 2.5-fold greater than average concentrations in 2019 sediments from inside SRKW Critical Habitat (0.1458 mg/kg dw, Brown et al. 2022). While average Cd concentrations outside Critical Habitat were below CCME sediment quality guideline (0.7 mg/kg dw), the north coast site (SRKW-20-004) did however exceed it by 2.1-fold (Figure 3).

Copper (Cu) concentrations were detected at all sites and were greatest at the two Strait of Georgia sites (SKRW-20-006, SKRW-20-007), followed by the Cowichan Bay site (COW-20-Sept) (Table 5, Figure 3). Average Cu concentrations were 1.7-fold higher outside Critical Habitat (32.18 mg/kg dw) than the average concentration in 2019 sediments from inside SRKW Critical Habitat (18.70 mg/kg dw, Brown et al. 2022). Average Cu concentrations outside Critical Habitat exceeded the CCME sediment quality guideline (18.70 mg/kg dw) by 1.7-fold (Figure 3).

Lead (Pb) concentrations were detected at all sites and were greatest at the two Strait of Georgia sites (SKRW-20-006, SKRW-20-007), followed by north coast site (SRKW-20-003) (Table 5, Figure 3). Average Pb concentrations were 1.2-fold higher outside Critical Habitat (7.579 mg/kg dw) than the average concentration in 2019 sediments from inside SRKW Critical Habitat (6.565 mg/kg dw, Brown et al. 2022). Average Pb concentrations outside Critical Habitat, as well as concentrations at all sites, were below the CCME sediment quality guideline (30.20 mg/kg dw) (Figure 3).

Mercury (Hg) concentrations were detected at all sites and were greatest at the two Strait of Georgia sites (SKRW-20-006, SKRW-20-007) (Table 5, Figure 3). Average Hg concentrations were 1.3-fold higher outside Critical Habitat (0.0581 mg/kg dw) than the average concentration in 2019 sediments from inside SRKW Critical Habitat (0.435 mg/kg dw, Brown et al. 2022). Average Hg concentrations outside Critical Habitat, as well as concentrations at all sites, were below the CCME sediment quality guideline (0.13 mg/kg dw) (Figure 3).

Zinc (Zn) concentrations were detected at all sites and was greatest at the north coast site (SRKW-20-003), followed by the two Strait of Georgia sites (SKRW-20-006, SKRW-20-007) and north coast site (SRKW-20-002) (Table 5, Figure 3). Average Zn concentrations were 1.1-fold higher outside Critical Habitat (65.70 mg/kg dw) than the average concentration in 2019 sediments from inside SRKW Critical Habitat (60.42 mg/kg dw, Brown et al. 2022). Average Zn concentrations outside Critical Habitat, as well as concentrations at all sites, were below the CCME sediment quality guideline (124 mg/kg dw) (Figure 3).

For the other 30 remaining metals average concentrations outside resident killer whale Critical Habitat were below the average concentration in 2019 sediments from inside SRKW Critical Habitat, except for beryllium, bismuth, chromium, iron, lithium, titanium, and zirconium (Table 5, Brown et al. 2022).

4.0 Acknowledgements

The authors wish to acknowledge the financial contribution and logistical support of Environment and Climate Change Canada and its Disposal at Sea program. In particular, we thank Roanna Leung for her assistance on sampling, study design, and monitoring of Disposal at Sea sites. The authors also wish to thank the crew of the CCGS *Vector* for expert support.

Table 7. Percent detect for PCB ($n = 159$) and PBDE ($n = 40$) congener data.

PCBs	Frequency Detected	Number of Congeners
All Sites ($n = 8$)	0%	19
	>0 to <70%	30
	70 to 100%	10
	100%	100
PBDEs		
All Sites ($n = 8$)	0%	11
	>0 to <70%	14
	<70 to <100%	5
	100%	10

Table 8. Sediment samples from sites located outside Southern and Northern Resident Killer Whale Critical Habitat were analyzed for 159 polychlorinated biphenyls (PCBs). All values are reported in pg/g dry weight. < = values below reporting limit (RL). NDR = peak detected but did not meet quantification criteria, result reported represents the estimated maximum possible concentration. The dominant congeners are in bold for coeluting congeners. Blanks = data not quantifiable.

Table 9. Sediment samples from sites located outside Southern and Northern Resident Killer Whale Critical Habitat were analyzed for 40 polybrominated diphenyl ethers (PBDE). All values are reported in pg/g dry weight. < = values below reporting limit (RL). NDR = peak detected but did not meet quantification criteria, result reported represents the estimated maximum possible concentration.

Table 13. Sediment samples from sites located outside Southern and Northern Resident Killer Whale Critical Habitat were analyzed for polycyclic aromatic hydrocarbons (PAH). All values are reported in ng/g dry weight. < = values below reporting limit (RL). NDR = peak detected but did not meet quantification criteria, result reported represents the estimated maximum possible concentration. Blanks = data not quantifiable

Table 18. Sediment samples from sites located outside Southern and Northern Resident Killer Whale Critical Habitat were analyzed for Dioxins (PCDD) and Furans (PCDF). All values are reported in pg/g dry weight. < = values below reporting limit (RL). NDR = peak detected but did not meet quantification criteria, result reported represents the estimated maximum possible concentration.
